Subject:	Re: measure and document reduction in KW demand of new LED system & maintenance costs on new Lighting Plant
Date:	Tuesday, July 12, 2016 9:23:20 AM

Mike, I wondered if GSA Energy might have a sample energy audit measurement SOW for FERC to consolidate with Phil's SOW?

>> This energy audit will be required to defend any Request for Equitable Adjustments the Lessor asks for when he claims his **annual operating costs (1217)** will increase in order to maintain the new lighting system. At that time the Government can pursue a reduction of the (1217) using our audit as back up to show both the lower KW demand as well as the less frequent need for maintenance on the new LED lighting plant.
>>
>> One change the Lessor will submit an Request for Equitable Adjustment is the new requirement of managing the new lighting control system.
>>
>> We have experience with this Lessor and Equitable Adjustments, his first request came right after we moved in, it was an increase of energy usage for the IBM mainframe. Five years into the lease after the IBM equipment was removed, we paid an electrical engineer company $9000 to measure and document the reduction in consumption, we successfully challenged the total KW on the first adjustment and cut in to less than half, it saved the government $1million to the end of the lease September 2015.

Hello Edwin,

RE: Rebate information

This is the link to DCSEU to apply for available energy rebates. I assume this would be the build out contractors responsibility?

https://www.dcseu.com/for-my-business/standard-rebates/apply-for-rebates?gclid=CIKo2Py9680CFQmqaQodjnMPLA

Also, I am attaching The GSA NCR rebate payee information, should any rebate become available to the government.

Mike, thanks for the information:

- Attached please find a rough draft of the SOW (provided by Phil Mudd of FERC) . Please review and comment.
- I will forward this rough draft for an estimate.
- When can you or your staff meet with FERC on site to advise on installation of metering for the energy audit?

> The attached SOW is not complete, it does not have the wording for

measuring the new state of the art lighting plant, which should include KW draw as well as estimated annual maintenance costs, for the new state of the art lighting system and controls

The new 1217 costs are as follows

$33,820 item **12. REPLACEMENT OF BULBS, TUBES, STARTERS**

$30,862 item **14. SYSTEM MAINTENANCE AND REPAIR *(Ballasts, fixtures, etc.)***

Subject: FERC - Capturing Energy Savings

Ron, We need your help with two items:

- Review and comment on the SOW for energy audit the FERC sent us.
- Set up a date and time to meet on site with FERC personnel to review placement, type and number of meters and related equipment to establish baseline foe audit.

These requests have been out there for a while coupled with the fact that the renovation project is moving forward on schedule time is short.

Thank you for your help.
